

7788F/7744F Series Fire Subscribers

Overview

AES 7788F/7744F Series Subscribers are the ideal universal wireless communicators for any new or existing fire alarm system. AES-IntelliNet® networks are built using AES Corporation's patented mesh radio communications technology. A Smart Subscriber at each alarm site acts as transmitter, receiver, and repeater of alarm signals across the network. This creates a smart long-range radio network with multiple pathways between each alarm site and the central receiver. Multiple pathways mean multiple redundancies assuring the most reliable delivery of signals and compliance with rigorous industry standards. AES-IntelliNet networks self-adjust to network changes and assure that signals automatically follow the shortest path available as the network of Subscribers grows.

Key Features

- AES-IntelliNet smart mesh radio networks are self-forming, self-healing, and highly scalable.
- AES-IntelliNet alarm communications technology never sunsets compared to cellular alternatives.
- Each Smart Subscriber enables multiple paths to a central monitoring station.
- Option to transmit full data from FACP digital dialer to AES-MultiNet receiver.
- Simple and fast activation on AES-IntelliNet network.

Benefits

- Most stable and profitable fire alarm communication technology.
- Network owner-operators retain virtually all RMR.
- Meets UL 864 Commercial Fire Alarm requirements for primary standalone communication.
- Ideal drop-in full-function replacement for phone lines.
- Universal wireless Smart Subscriber Transceivers support all new and legacy FACPs.
