
Managing Your Own Network

AES Corporation's technology gives you the ability to own your network, brand your network, and see your network. In this e-book, you will learn about the benefits of network ownership as it applies to AES's Network Management System, which allows dealers like you to see, manage, and control their networks when, where, and how they want.

PART 01

The Benefits of an AES Network

PART 02

See Your Network

PART 03

The Benefits of an AES Network

OWN YOUR NETWORK

Owning your network means minimal reliance on public infrastructure - it's yours! Additionally, once your investment is paid for, all of the revenue generated goes straight to your profit margin. AES customers have the benefit of being able to manage and actively grow their own networks anywhere at any time.

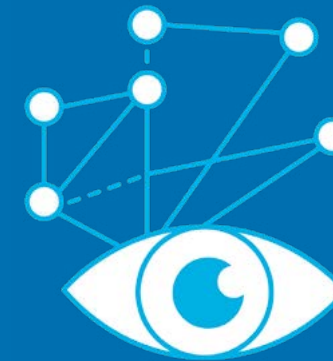

BRAND YOUR NETWORK

As the sole owner of your private network, you can brand it as your own, giving you a leg up on local competition. AES provides a marketing portal for our customers featuring collateral to get you started on branding your network.

SEE YOUR NETWORK

AES Network Management System provides a real-time visual presentation of the operation and function of an AES mesh radio alarm network. Want a sneak peek at the NMS tool? Keep reading!

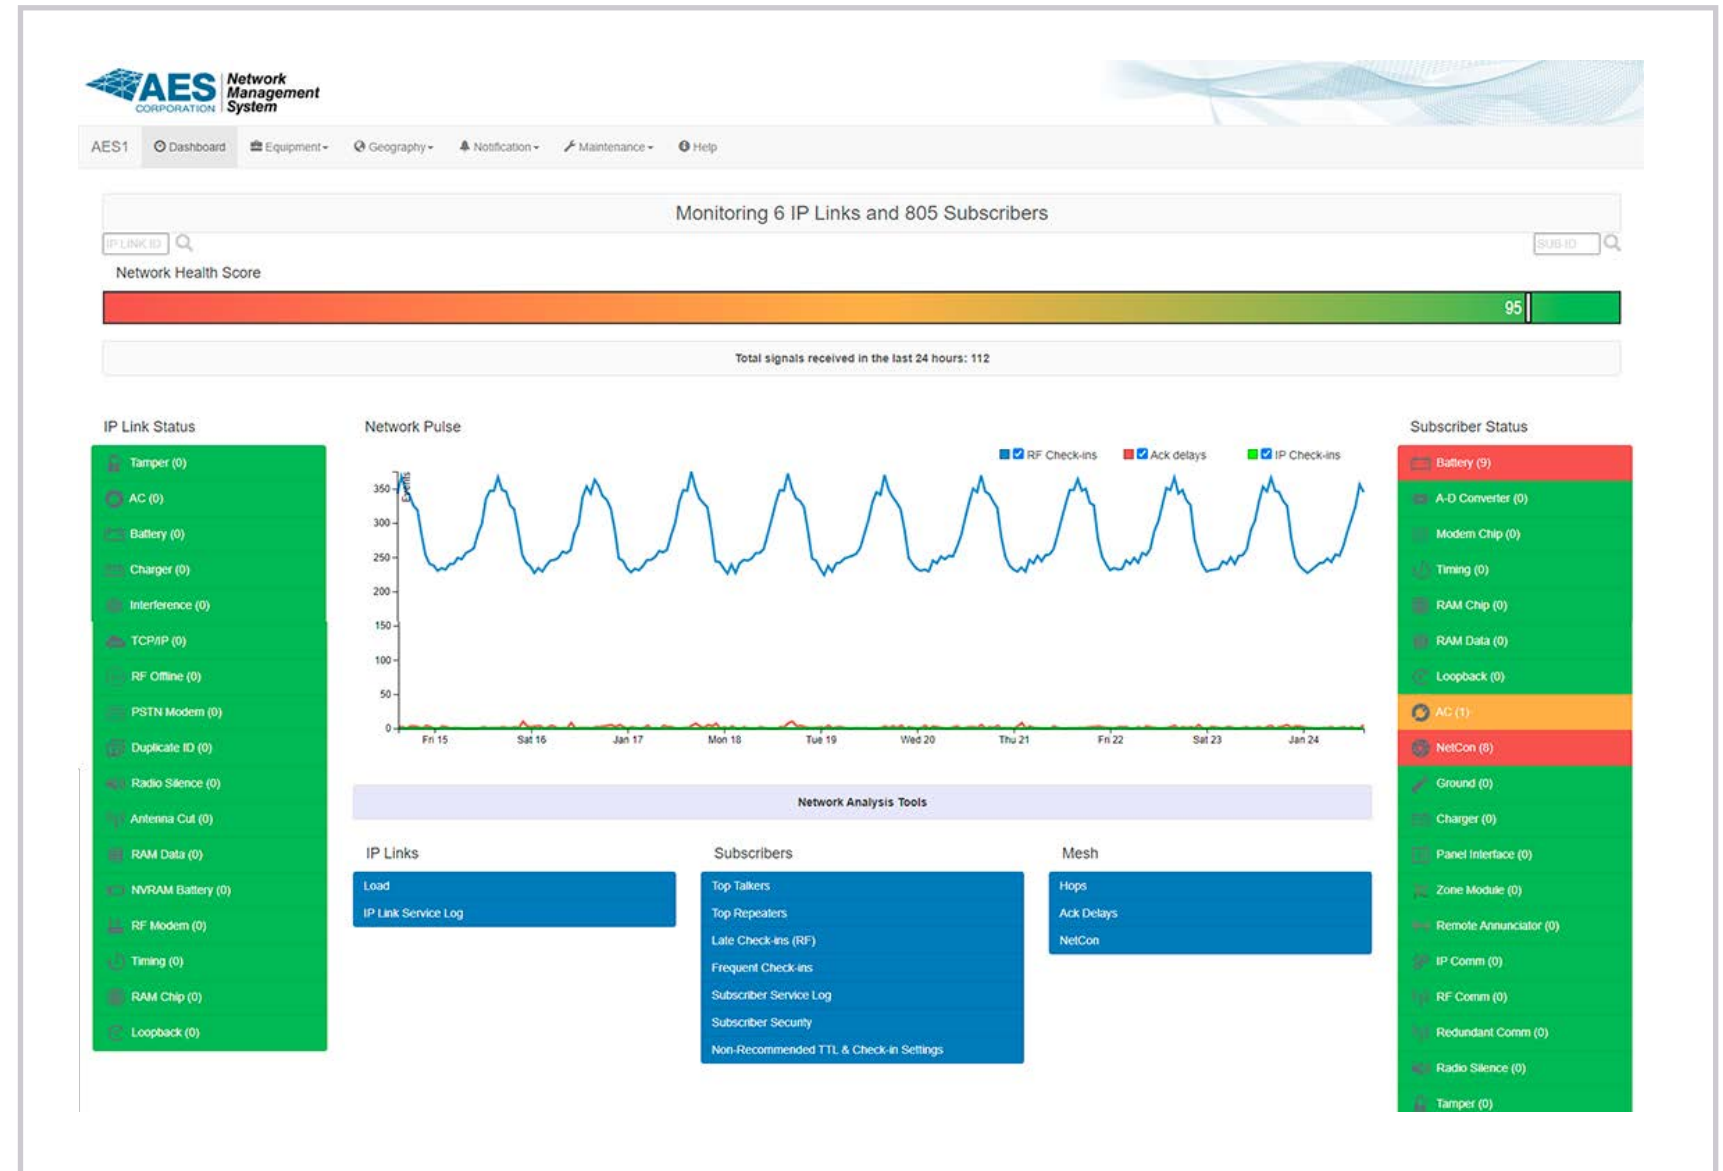

See Your Network

AES Corporation provides the only technology that enables full visibility into your customers' alarm communications status.

AES technology gives you the tools needed to bring every aspect of network management in-house. This means that you can offer your customers the assurance of immediate response and a network managed by competent people who genuinely care about their safety.

THE TOP BENEFITS OF SEEING YOUR NETWORK

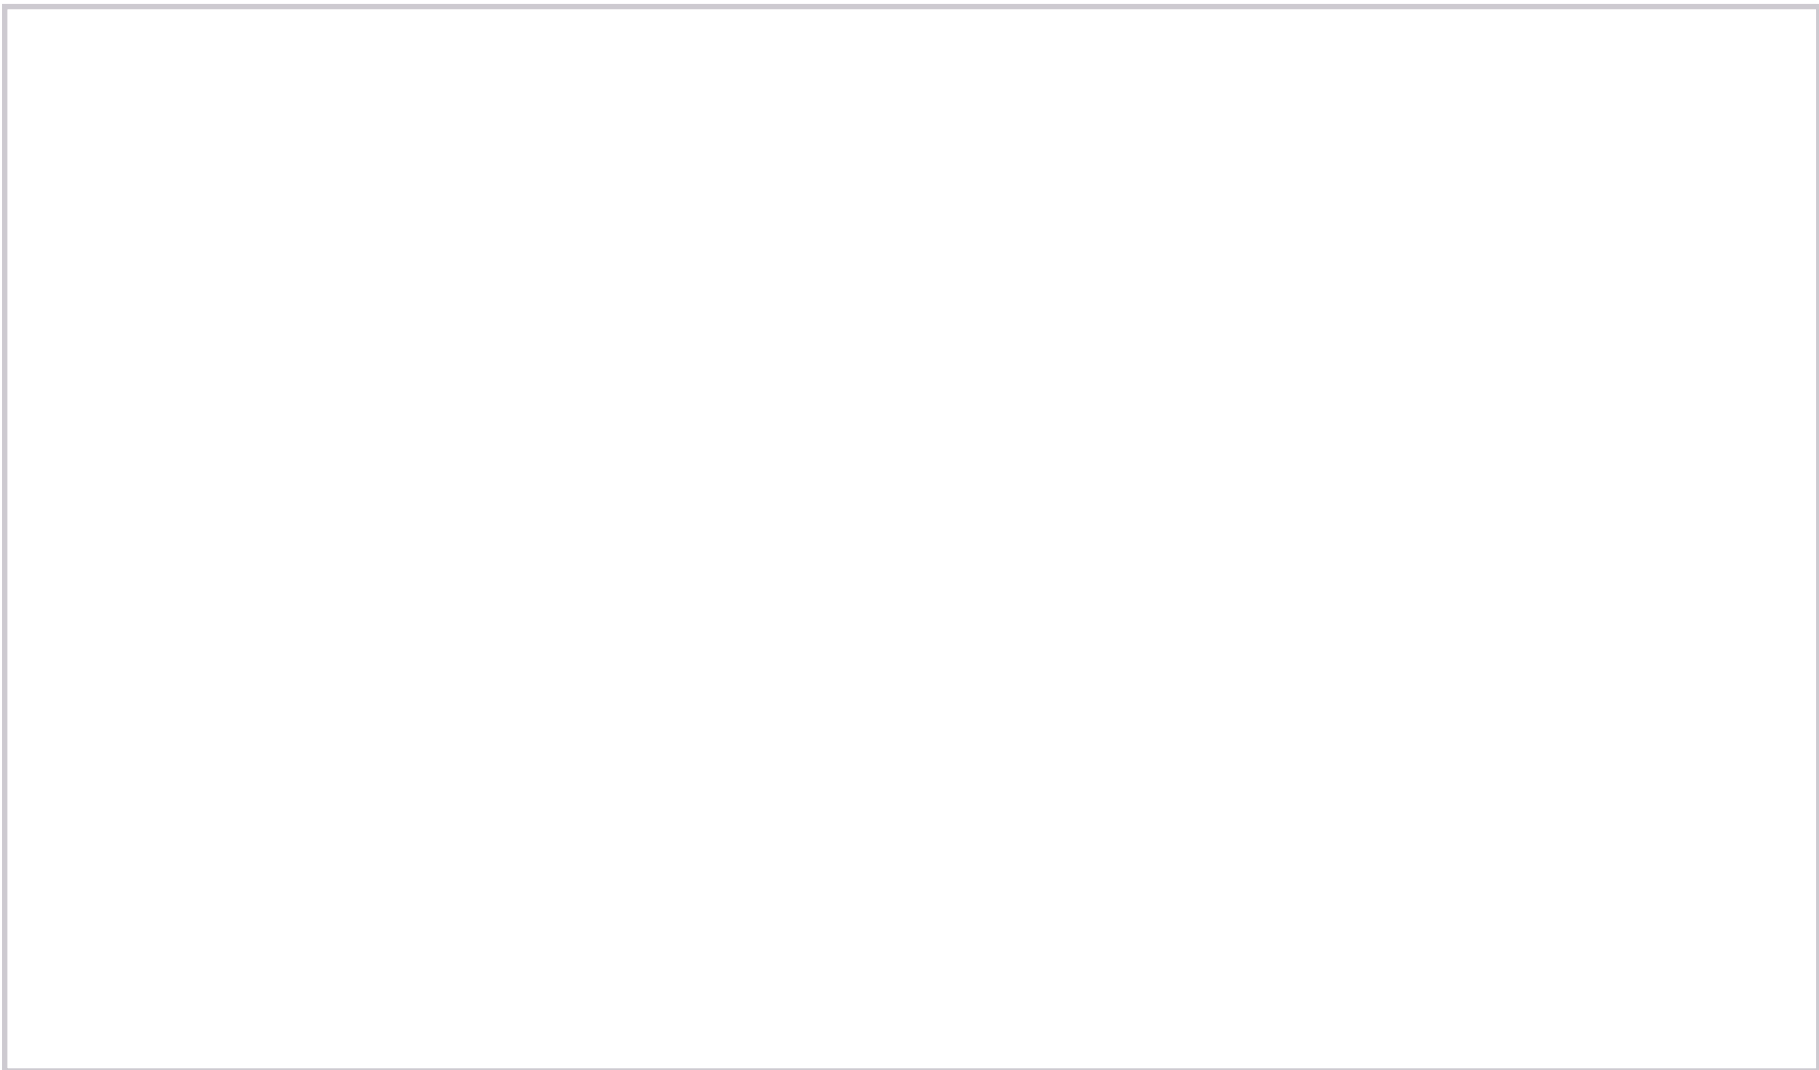

- » See and manage your network from one dashboard in real-time.
- » Receive immediate, real-time text and email notifications regarding network events.
- » Monitor the health of your network with AES's intuitive NMS Dashboard.
- » Visually plan to strengthen and expand your network with Google Earth™ integration.
