

## CLSS Gateway + AES-IntelliNet® Integration

### No DACT? No problem!

Connect compatible Honeywell Fire Panels and the Connected Life Safety Services (CLSS) Gateway to an AES 7707 2.0 Fire Subscriber via Ethernet cable.

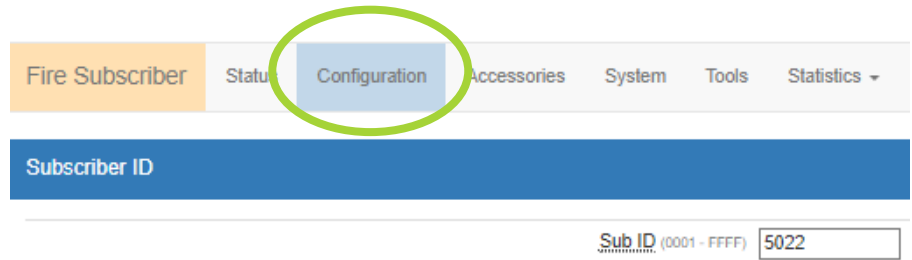

## Communicator Features with CLSS Gateway

- \*Compatible with Notifier Onyx and Inspire Series and Gamewell E3 and S3 series.
- Transmits alarm signals from the fire panel over an AES Mesh Network to your monitoring station.
- No need for dialers or UDACTs.

# Enabling CLSS from the Subscriber GUI

## Step 1

Once you are logged in to the Subscriber GUI, navigate to the configuration tab.

## Step 2

Scroll down to the CLSS panel Configuration and select CLSS from "Subscriber config" drop down field. Enter 4-Digit Hex number for the alarm panel under the "Account Number" field and click "Save Changes".

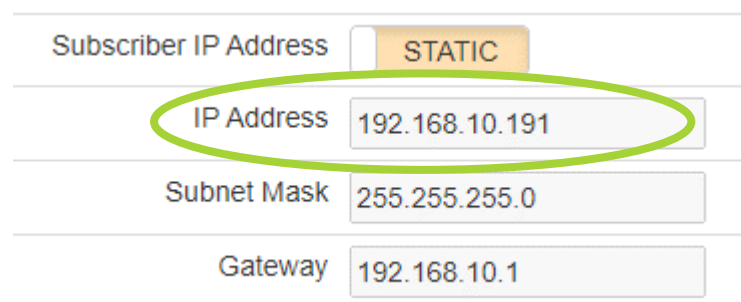

## Step 3

Scroll up and click "Update" to configure Subscriber.

## Important Notice

After you click "Update" the **IP address of Subscriber** will change to 192.168.10.191, this IP address is needed to communicate with CLSS gateway and should not be changed.
